Data Loader

Improvements

-  Transmission Report Status
-  Data Extract
-  Data Partitioning

Bug Fixes

Configuration Manager

Bug Fixes

Data Loader Improvements: Transmission Report Status

- Transmission Report Status shown on Dashboard with link to report, removing the need for Administration access to view the results of data uploads to OTM.

The screenshot displays the 'Excel Files' dashboard. At the top, there is a toggle for 'My Files' which is currently turned off. Below this are four navigation tabs: 'Recent Activity' (which is selected), 'Upload Files', 'Data Extract', and 'Template Files'. A dropdown menu shows the number '5'. The main content area lists two recent activities:

File Name	Status	Details	Time
CUSTOMER_A	Batch XML Sent	CS DEMO - LOCATIONS-20240205105122	3 hours ago
CUSTOMER_A	Batch XML Sent	Data OTM Cloud Test (A398782)	3 hours ago

The second activity entry includes a green 'Transmission Successful' badge.

Data Loader Improvements: Data Extract

- 🔹 Simulation mode added to test Data Extract SQL
- 🔹 Bulk extract enabled
 - 🔹 Automatically batches extracts and aggregates into one Excel File
 - 🔹 Respects the data extract size limits imposed by Oracle on DB.XML interface

Data Loader Improvements: Data Visibility

Data Partitioning

-  For new installations segregate data using Data Partitioning only, legacy Data Set functionality is maintained for existing installs.
-  Template assignment across Data Partitions is now available within the User Interface
-  Removes the need to manually assign templates from the database and ensures a single master copy of a template can be used

Data Loader Bug Fixes

- 🔹 EVOLV-561: Unable to accept Excel Files via Inbound Integration using HTTP POST
- 🔹 EVOLV-560: Lookup Column not being displayed in Excel Column when Template type is Lookup
- 🔹 EVOLV-535: Data Extract status shows as completed when No Data Found

Configuration Manager Bug Fixes

- EVOLV-537: Delete instruction not working in OTM when using DB.XML interface to upload configuration
